

Findings

Time: 2025-06-04 22:28:12 UTC
IOC Domain: cfx[.]io
Attack Vector: Phishing (possible credential harvesting)
Subject: Security Notification
Sender: 82p8n1e3@cfx[.]io
Reply-To: 82p8n1e3@cfx[.]io
Email ID: +PVMBrwAQWgPow0Ae4cVtA

Investigation

On 2025-06-04 22:28:12 UTC, an inbound email from 82p8n1e3@cfx.io was received by the mail server srv7.swhc.ca.

The domain cfx.io is not associated with MetaMask and has been flagged by security vendors for phishing activity and potential links to malware.

The email failed DKIM validation. Additionally, it was identified by Pyzor as matching previously reported spam samples, indicating it is part of a broader phishing campaign.

Further analysis revealed the use of Cyrillic characters in the display name "MetaMask", a known obfuscation technique used to evade detection and mislead recipients.

The email body contains a shortened URL (t.co), which is the official URL shortener of X (formerly Twitter), likely used to obscure the final destination and bypass security controls.

The message creates a sense of urgency and prompts immediate action, which may lead to credential harvesting or malware delivery.

The presence of the header "X-PHP-Originating-Script: 10193:bin.php" suggests the email was sent using an automated script, commonly observed in phishing campaigns.

Summary (5W Analysis)

WHO: cfx[.]io
WHAT: Sent a phishing email to inquiry@mydfir.com
WHEN: 2025-06-04 22:28:12 UTC
WHERE: Received on srv7.swhc.ca mail server
WHY: Likely credential harvesting or phishing campaign
HOW: Delivered via external SMTP infrastructure using scripted email generation

Assessment

This email is classified as a phishing attempt leveraging brand impersonation (MetaMask), Unicode obfuscation, and trusted infrastructure (t.co) to evade detection and increase credibility.

Confidence Level: High

Recommendations

1. Search email logs for additional messages using the ID +PVMBrwAQWgPow0Ae4cVtA.
2. Review network logs for connections to:
hxxps://t[.]co/hdSGlufCET?id=7833882918994061387-6045
3. Block the domain cfx[.]io at the email and network level.
4. Investigate endpoints that received the email for potential user interaction or downloads.
5. Conduct phishing awareness training for employees.
